

Preventing Dangerous Stovetop Fires with Stove Guard

Saskatoon, SK. December 19, 2008– Revolutionary fire prevention system has been created in Saskatoon, Canada. Stove Guard, a fire prevention safety device dramatically reduces the chance of a stovetop fires starting by automatically turning the stove elements off when its motion sensor detects that no one is present in the cooking area of the kitchen. **The patented Stove Guard is designed to turn the stove off when you forget.** www.stoveguardintl.com
In United States an estimated 47,000 residential fires a year start on range tops, injuring more than 2,400 people, killing about 80 and causing \$135 million in property damage according to the Consumer Product Safety Commission.

“A kitchen fire is everyone’s worst nightmare and the number one cause of house fires. “Says Don Uhrich, President, Stove Guard International Ltd. almost everyone is aware of a kitchen accident caused by someone leaving a pot or pan on the burner too long, simply forgetting while engaged in other activities. Unfortunately, these incidents occur mostly with our senior population. Stove Guard is a unique safety device that uses advanced technology to control the stove's electrical system. It is very easy to install and use. A power control box connects between the stove plug and existing wall outlet. A small sensor/adjustable timer unit mounts to an upper cabinet or to the wall near the stove. in most cases, installation and setup takes about 10 minutes and, doesn’t require an electrician. Fire prevention Officers and Occupational Therapists who work with Alzheimer’s sufferers and other forgetful people have praised Stove Guard’s effectiveness. It has allowed people, who otherwise would have been institutionalized, remain in their homes safely longer. Customers are very happy with the peace of mind Stove Guard brings, while protecting their loved ones and their property.

Don Uhrich says, a long awaited Stove Guard model for Gas stoves will be introduced in 2009. This is a much needed product designed to protect against Gas stovetop fires. The added gas sensor will turn off the main gas valve if there is an unsafe level of gas in the kitchen, this could be caused by a gas leak or an element flame that has gone out allowing the gas to continue to escape into the room causing the potential of a serious explosion or fire.

Background:

Stove Guard International Ltd. and Save On Security Systems Inc. has developed and distributed personal safety/security devices worldwide since 1990, marketing Stove Guard throughout North America for the last 5 years.

Stove Guard International Ltd. manufactures and markets the Stove Guard product line of kitchen fire safety devices. Stove Guard helps prevent unattended cooking stovetop fires, the # 1 cause of house hold fires, by controlling power to the kitchens stove. Endorsed by Fire Marshals across North America as an effective fire prevention device, it is recommended for use in every home. They are currently establishing dealers across North America and also ship factory direct to their customers.

Stove Guard - Peace of Mind was never easier to achieve:
